Ride Description
By the numbers, this is the most challenging day of the week, with spectacular scenery to balance and boost spirits. We spend the first 23 mi on US 1’s wide shoulders with little morning traffic. First stop is historic Fort Knox on the Penobscot River and the Penobscot Narrows Bridge and Observatory (tallest bridge observatory in the world at 420 ft). We leave US 1 to explore one of Maine's best-kept secrets—the Blue Hill Peninsula. Lunch is in Blue Hill, where you can check out “The Window of the Sea Wind,” a Schoodic International Sculpture Symposium piece by Hiroshi Tanaka, located next to the town boat landing. The views along Parker Point Rd (Blue Hill Falls) and from the top of Caterpillar Hill will take your breath away. As you arrive in Castine, be ready for a memorable welcome. Camp tonight is within the boundaries of historic Fort George.

**Mileage is computed using GPS and may vary from your odometer. Verify turns by checking route markings, street names and odometer.

Leave Belfast Boathouse, going north on Front St. to Water St. 0
Turn right onto Belfast Pedestrian Bridge (walk bikes) 0.7
Resume bicycling on other side of bridge, Footbridge Rd. 0.9

Enter Castine, bear right at golf course (Battle Ave. no sign) 72.4

Downtown Castine, Fort George, end Day 3 72.8

The Gulf of Maine
The Gulf of Maine is one of the most biologically productive marine ecosystems on the planet. The Conservancy is working to restore critical habitats and rebuild depleted fish populations. We are working directly with fishermen to research more sustainable fishing practices and are sharing the results with fishermen, scientists, and various governmental agencies responsible for managing the Gulf’s fisheries.

Afternoon Speaker, Emerson Hall: John Sowles, recently retired Director of Ecology at the ME Department of Marine Resources.
